

ESRI ArcGIS Online Training (offsite) Friday, July 19th

ArcGIS Online is a new cloud-based mapping system for organizations that is essentially changing how GIS managers, as well as IT managers, think about mapping and GIS," said Jack Dangermond, president, Esri. "ArcGIS Online works with all types of data and is built on a powerful enterprise mapping platform that lets users simply manage their geospatial content, such as data, maps, images, applications, and other geographic information.

With ArcGIS Online Web Map, the software comes ready to use requiring no installation or setup. This allows you to stay in control of your data and easily share your interactive maps over the web.

- Effortlessly share information through blogs, web pages, web applications, Facebook or Twitter.
- Ability to go mobile utilizing free ArcGIS application for smartphones or by using your web browser.
- Ready to use content available at your fingertips including basemaps, demographic maps, image services and data.
- An easy-to-use workspace for collaborating with others and sharing maps, data and other geospatial content.
- Ability to create custom web and mobile applications while controlling access to your data and information.

This FREE 3-hour workshop is offered to conference attendees to go over the basics to create and use webMaps and how to get your maps to smart phones including iPhones and Android. No experience required; ArcGIS desktop knowledge a plus. Come and see how the new cloud computing is changing GIS and how we collaborate with maps.

When: Friday July 19th. 9AM - Noon OR 1PM - 4PM

Where: ESRI Learning Center

1357 Kapiolani Boulevard, Suite 1100

Honolulu, Hawaii 96814

GPS: 21° 17.647' N, 157° 50.706' W (WGS84)
